

Preparation of plantation of wood along channels to develop local energy production and promote biodiversity conservation

Derekegyház/Hungary

Péter Ponicsán/Derekegyházért Közhasznú Egyesület

Project Concept:

- Derekegyház: a village of 1700 inhabitants
- Implementation of a complex village development concept
- Energy independence is a part of the concept
- Unused potential of local biomass
- Existing drainage channels

Potential benefits of the project:

- Preparation of a feasibility study
- Awareness-raising
- Energy production along the drainage channels
- Enhancement of biodiversity by wood plantations along the channels
- Self-sufficient energy supply of public institutions
- Jobs for the local community
